

write me an expose for this topic

I have written a complete **Exposé (Proposal)** for you. This document is structured academically and is ready to be submitted to your supervisor for approval.

It covers:

1. **Motivation:** Why latency and safety are big problems.
2. **Objectives:** Building the "Ghost vs. Shadow" robot system in UE5.
3. **Methodology:** How you will "fake" the real robot using simulated defects (latency/noise).
4. **SOTA References:** Citing the 2024–2025 papers we found.

You can download this file, fill in your name/program, and send it to your professor. It frames your "Unreal Engine only" limitation as a rigorous "Simulation-as-Hardware" validation strategy.
